

Eric Khodorenko

eric_khodorenko@berkeley.edu | Berkeley, CA | [Portfolio](#) | [GitHub](#)

EDUCATION

University of California, Berkeley

Berkeley, CA

B.S. Electrical Engineering and Computer Sciences | GPA: 3.66/4.0

Exp Dec 2026

- **Honors & Awards:** Eta Kappa Nu (HKN), IEEE Honor Society
- **Relevant Coursework:** CS61A-C, EECS16A/16B, EECS106A, CS161, CS189, CS180, CS280

TECHNICAL SKILLS

- Python, PyTorch/NumPy/Pandas, LangGraph/Langsmith, Java, Node.js/JS/React, Git, C/C++

EXPERIENCE

Workday

Pleasanton, CA

Machine Learning Engineer Intern

May 2026 - August 2026

- **Reduced latency** of Workday's Self Service Agent **by 15%** by **designing** a smarter, **more efficient agent harness**.
- **Improved agent evaluations by prompt engineering** simulated users of the self service agent **reducing the latency and cost of evals by 10%**.

Sky Computing Lab

Berkeley, CA

Undergraduate Researcher

February 2026 - Present

- **Researching** the potential of **prompt optimization** to **induce diversity** in the responses of LLMs.

FlourishAI

Berkeley, CA

Machine Learning Engineer Intern

June 2025 - August 2025

- Designed and built Flourish: an AI-powered nutrition companion to help users manage chronic conditions using a **multimodal assistant** that powers **AI insights**.
- **Enhanced** the Retrieval-Augmented Generation (RAG) pipeline by **identifying and integrating novel data sources**, significantly **boosting the LLM's ability to provide personalized and culturally competent nutritional guidance**.
- **Implemented nutrient tracking and meal summarization features**, enabling users to more effectively monitor their daily intake and manage their health conditions.

Huang Lab at UCSF

San Francisco, CA

Undergraduate Researcher

January 2025 - May 2025

- **Researched AI gene network models** that integrate genomic, genetic and gene expression datasets **to evaluate their ability to predict complex gene networks and functional outcomes** after in silico gene perturbation.

Rapid Reviews Infectious Diseases

Berkeley, CA

Undergraduate Apprentice

January 2025 - May 2025

- Developed an NLP pipeline utilizing Python and RAG to speed up the process of finding compelling, novel preprints.
- Deployed the system to **accelerate peer review workflows**, increasing reviewer efficiency and reducing editorial time.

TECHNICAL PROJECTS

EECS106A - [Ping Pong Bot](#)

- Worked with a small team to build an end-to-end **ROS2 system** that detects a **ball flying through the air** with a simple Logitech C922 camera, **predicts and visualizes the flight path**, and **rapidly moves a UR7e robotic arm to intercept the ball** with a ping pong paddle.
- **Debugged and tuned hardware to address real world vision constraints** like camera noise, camera FPS, and HSV filtering in dynamic lighting conditions.

CS280 - [Generative Head for CUT3R's 3D Reconstruction Model](#)

- **Designed a new RGB head architecture** for the CUT3R 3D reconstruction model, replacing the DPT head with a **Flow Matching head to generate improved novel views** from CUT3R's latent representation of a scene.
- Co-authored a paper describing our findings and showing an **improved LPIPS score on novel views** compared to the DPT head

CS180 - Flow Matching + NeRF

- Implemented a **Flow Matching** generative model using PyTorch from scratch; trained a neural network to learn optimal vector fields for transforming Gaussian noise into MNIST digits.
- Developed a **Neural Radiance Field (NeRF)** architecture using PyTorch from scratch to synthesize novel views of 3D scenes from a sparse set of 2D images.
- Engineered a **rendering pipeline for NeRF** implementing stratified ray sampling, positional encoding, and volume rendering to map location and viewing direction to RGB and density values.
